| Class: | SE | Semester: | III |
| Course Code: | CSC304 | Course Name: | DLCA |

| | |
|----------------------|---|
| Name of Student: | SHARVARI ANAND BHONDEKAR |
| Roll No. : | 06 |
| Assignment No.: | 02 |
| Title of Assignment: | APPLY THE ARITHMETIC ALGORITHMS TO SOLVE ALW OPERATIONS |
| Date of Submission: | 16/8/24 |
| Date of Correction: | 16/8/24 |

Evaluation

| Performance Indicator | Max. Marks | Marks Obtained |
|------------------------|------------|----------------|
| Completeness | 5 | 4 |
| Demonstrated Knowledge | 3 | 3 |
| Legibility | 2 | 2 |
| Total | 10 | 9 |

| Performance Indicator | Exceed Expectations (EE) | Meet Expectations (ME) | Below Expectations (BE) |
|------------------------|--------------------------|------------------------|-------------------------|
| Completeness | 5 | 3-4 | 1-2 |
| Demonstrated Knowledge | 3 | 2 | 1 |
| Legibility | 2 | 1 | 0 |

Q. Draw flowchart of Booth's multiplication algorithm and multiply (-7) and (-3) using Booth's algorithm.

START.

$A \rightarrow 00 \dots 0$

$Q \rightarrow \text{Multiplicand}, Q_1 \rightarrow 0$

$M \rightarrow \text{Multiplier}$

Count $\rightarrow n$

$A \leftarrow A + M$

01

Q_i, Q_{i-1}

10

$A \leftarrow A - M$

00
11

Arithmetic right shift

A, Q, Q_1

Count $\leftarrow \text{Count} - 1$

Yes

No

count = 0

?

Yes

STOP

$(-7) = 1001 = M$, 2's complement of $M = 0111$
 $(-3) = 1101 = Q$.

| Count | A | Q | Q ⁻¹ | Operation |
|-------|--------------------------------------|------|-----------------|---|
| | 0000 +0111 <u>0111</u> 0011 | 1101 | 0 | Initial $A \leftarrow A - M$ $\therefore A \leftarrow A$ Right shift |
| 3 | 0011 1001 <u>1100</u> 1110 | 1110 | 1 | $A \leftarrow A + M$ Right shift |
| 2 | 1110 0111 <u>0101</u> 0010 | 0111 | 0 | $A \leftarrow A - M$ $\therefore A \leftarrow A$ Right shift |
| 1 | 0010 0001 | 1011 | 1 | Right shift |
| 0 | 0001 | 0101 | 1 | |

$\therefore (0001 \ 0101)_2 = (21)_{10}$

$7 \times 3 = 21$ and binary representation is

Q2.] Perform Division Restoring Algorithm for Dividend = 13 and Divisor = 5

→ Dividend = 13 = 01101 = Q
 Divisor = 5 = 00101 = M
 2's complement of M i.e. = 11011

| Count n | A | Q | Operation |
|------------|---|---|--|
| 5 | 00000 00000 + 11011 11011 → 00000 | 01101 1101- 1101- 11010 11010 | Initial Shift left $A \leftarrow A - M$ $\therefore A \leftarrow A + 2^1(M)$ $Q[0] = 0$ Restore A |
| 4 | 00000 00001 + 11011 11100 → 00001 | 11010 1010- 1010- 10100 10100 | Shift left $A \leftarrow A - M$ $\therefore A \leftarrow A + 2^1(M)$ $Q[0] = 0$ Restore A |
| 3 | 00001 00011 + 11011 11110 → 00011 | 10100 0100- 0100- 01000 01000 | Shift left $A \leftarrow A - M$ $\therefore A \leftarrow A + 2^1(M)$ $Q[0] = 0$ Restore A |
| | → 00011 | 01000 | Restore A |

| Count n | A | Q | Operation |
|------------|--|---|--|
| 2 | $ \begin{array}{r} 00011 \\ 00110 \\ + 11011 \\ \hline 00001 \\ 00001 \end{array} $ | $ \begin{array}{r} 01000 \\ 1000- \\ \hline 1000- \\ 100001 \end{array} $ | left shift $A \leftarrow A - M$ $\therefore A \leftarrow A + 2^1(M)$ $Q[0] = 1$ |
| 1 | $ \begin{array}{r} 00001 \\ - 00011 \\ + 110101 \\ \hline 11110 \end{array} $ | $ \begin{array}{r} 10001 \\ 0001- \\ \hline 0001- \end{array} $ | left shift $A \leftarrow A - M$ $\therefore A \leftarrow A + 2^1(M)$ |
| | $ \begin{array}{r} \rightarrow 00011 \end{array} $ | $ \begin{array}{r} 00010 \\ 00010 \end{array} $ | $Q[0] = 0$ Restore A |
| 0 | 00011 | 00010 | <u>Answer</u> |

Quotient = $(00010)_2$ — from register 'Q'
 $= (2)_{10}$

Remainder = $(00011)_2$ — from register 'A'
 $= (3)_{10}$

Represent $(543.21)_{10}$ in single precision format and double precision format.

Step 1: Convert to binary number

$$(543.21)_{10} = ?$$

$$(543)_{10} = (1000011111)_2$$

$$0.21 \times 2 = 0.42 = 0$$

$$0.42 \times 2 = 0.84 = 0$$

$$0.84 \times 2 = 1.68 = 1$$

$$0.68 \times 2 = 1.36 = 1$$

$$0.36 \times 2 = 0.72 = 0$$

$$(0.21)_{10} = (0.00110)_{10}$$

$$\therefore (543.21)_{10} = (1000011111.00110)_2$$

Step 2: Normalization

$$(543.21)_{10} = 1.00001111100110 \times 2^9$$

N

Step 3: Determine exponents for single precision.

for single precision, compare with

$$1 \cdot N \times 2^{E-127}$$

$$\therefore E - 127 = 9$$

$$E = 136$$

Convert to binary

$$E = (10001000)_2$$

FOR EDUCATIONAL USE

Single precision \Rightarrow

| sign | Biased exponent | Mantissa (N) |
|-------|-----------------|--------------|
| 1 bit | 8 bit | 23 bit |

$\therefore 32 \text{ bit} = \text{single precision}$

| | | |
|-------|----------|-------------------|
| 0 | 10001000 | 00001111100110... |
| 1 bit | 8 bit | 23 bit |

Step 4: Determine exponent for double precision.

For double precision, compare with $(1 \cdot N) 2^{E-1023}$.

$$\therefore E - 1023 = 9$$

$$E = 1032$$

Convert to binary $\therefore E = (10000001000)_2$

Double precision

| sign | Biased exponent | Mantissa (N) |
|-------|-----------------|--------------|
| 1 bit | 11 bit | 52 bit |

$\therefore 64 \text{ bit} = \text{double precision}$

| | | |
|-------|-------------|--------------|
| 0 | 10000001000 | 000011111100 |
| 1 bit | 11 bit | 52 bit |
